OBJECTIVE

Motivated and passionate Computer Engineering student with strong skills in programming, problem-solving, and hardware-software integration.

Seeking an entry-level position or internship to apply technical knowledge and contribute to innovative projects.

SKILLS

- Programming Languages: Python, JavaScript, C, C++
- Backend: Django, Node.js
- Front-end: HTML, CSS, React.js
- Databases: PostgreSQL, MySQL, NoSQL
- Tools and Platforms: Git, GitHub, VS Code
- Others: Prompt Engineering, Problem-Solving, Team Coordination, Research Skills

EDUCATION

- Bachelor in Computer Engineering | Khwopa Engineering College, Bhaktapur
Status: Ongoing (8th Semester)
- +2 in Science | St. Xavier's School, Jawalakhel, Lalitpur
Status: Completed in December 2021 GPA: 3.36
- SEE | Prerana Vidhyashram School, Lalitpur
Status: Completed in 2019 AD GPA: 3.80

ACADEMIC PROJECTS

1. Gym Management System – Python, Streamlit, PostgreSQL
Developed a web-based system to manage memberships, track attendance, and handle payments. It also uses a user-friendly dashboard and secure database connectivity.
2. English Dictionary – Python, Django, PostgreSQL
Created a user-friendly web-based English Dictionary to search the meanings, synonyms, and antonyms of words.
3. Attendance Management System – C++ programming
Created a college attendance management system that can manage student's activities properly. It shows details of the days present and absent, monitoring the attendance status of the students.
4. Student Management System – C programming
This handles the details of the students, their personal information, and exam records. It can easily view or make changes to students whenever needed.
5. Online Cycle Store – WordPress, XAMPP
Used WordPress and XAMPP to create an online cycle store that replicates standard web stores. It can handle sales activities and payment activities easily.
6. AI Recipe Recommendation – Python, Django, Machine Learning, MobileNetV2, VGG16

Used Python Django and image classification models (MobilenetV2 and VGG16) to create a website that identifies the vegetable ingredients and gives recipe recommendations.

7. HoneyPot system – Node.js, React.js, PostgreSQL

The system creates fake ports and monitors attacks on those ports. It keeps a record of these attacks and also provides web monitoring.

8. To-Do Application - React.js

This application takes a record of a list of activities that are planned. Completed tasks can be marked as completed. It has a filter feature that enables users to see all the to-do activities, completed activities, and remaining activities. The project is still not completed, and the progress is ongoing.

9. EmailAiAssistant – Python, Django, React.js, Tailwind CSS, Redis, Celery, OAuth, Google Cloud Console

This web app can perform basic email activities like drafting emails, replying to emails, etc. The main functionality of this web app is that it uses the Gemini API to automate such activities. This is a smart Email assistant that can understand what is in the inbox and create drafts or auto-replies based on priority and the nature of the email. It also auto-schedules important events and meetings from the email.

10. ClothSA: Cloth Review Aggregator using Aspect-Based Sentiment Analysis – Python, Django, Selenium, Web Scraping, Machine Learning, T5-base Model

This web application is designed to make decision-making while buying clothes easier. The user needs to enter the correct Product URL from the Amazon e-commerce website, and then this system scrapes all the information about the clothes along with all the reviews in real time. Then the ML model extracts the aspects from the reviews and makes a sentiment analysis of that review, like positive, negative or neutral. It also has proper data visualization, enabling the user to understand the product in more detail.

ACHIEVEMENTS & EXPERIENCES

1. 3-Day Python Django Workshop at Vrit Technologies, 31st January
2. Participated in HULT Prize at Khwopa Engineering College, 2023
3. Participated in AWS Fundamentals Workshop by KhEC Knowledge Sharing Circle with AWS Cloud Club at TU, 16th August 2025
4. Participated in Lumivya Technology's 1-Day AI & Data Bootcamp: ATLAS (Agentic Tools, LLMs, and Scalable Systems), March 29th 2026\
5. AI/Data Internship at UBA Solutions (April 13th, 2026 – July 13th, 2026)
6. Exhibitor at National Exhibition – Aarohan 2.0 on 7th and 8th Shrawan (23-24 July 2026) at Khwopa Engineering College, Bhaktapur

ACTIVITIES AND INTERESTS

1. Technical Curiosity
2. Problem-solving mindset
3. Continuous Learning
4. Leadership and Teamwork
5. Extra-Curricular Activities
