OBJECTIVE

Motivated and passionate Computer Engineering student with strong skills in programming, problem-solving, and hardware-software integration. Seeking an entry-level position or internship to apply technical knowledge and contribute to innovative projects.

SKILLS

- Programming: Python, C, C++
- Backend: Django
- Front end: HTML, CSS, React.js, JavaScript
- Databases: PostgreSQL, MySQL, NoSQL
- Tools and Platform: Git, VS Code
- Others: Problem-Solving, Team Coordination, Research Skills

EDUCATION

- Bachelor in Computer Engineering | Khwopa Engineering College, Bhaktapur
Status: Ongoing (8th Semester)
- +2 in Science | St. Xavier's School, Jawalakhel, Lalitpur
Status: Completed in December 2021 GPA: 3.36
- SEE | Prerana Vidhyashram School, Lalitpur
Status: Completed in 2019 AD GPA: 3.80

ACADEMIC PROJECTS

1. Gym Management System - Streamlit, PostgreSQL
Developed a web-based system to manage memberships, track attendance, and handle payments. It also uses a user-friendly dashboard and secure database connectivity.
2. English Dictionary - Django, PostgreSQL
Created a user-friendly web-based English Dictionary to search the meanings, synonyms, and antonyms of words.
3. Attendance Management System - C++ programming
Created a college attendance management system that can manage student's activities properly. It shows details of the days present and absent, monitoring the attendance status of the students.
4. Student Management System – C programming
This handles the details of the students, their personal information, and exam records. It can easily view or make changes to students whenever needed.
5. Online Cycle Store using WordPress and Xampp
Used WordPress and Xampp to create an online cycle store that replicates standard web stores. It can handle sales activities and payment activities easily.
6. AI Recipe Recommendation - Django, ML models

Used Python Django and Image classifications models (MobilenetV2 and VGG16) to create website that identifies the vegetable ingredients and gives recipe recommendations.

7. HoneyPot system – Node.js, React.js, PostgreSQL

The system creates fake ports and monitors the attack on those ports. It keeps a record of these attacks and also provides web monitoring.

8. To-Do Application - React.js (Ongoing)

This application is created using React.js. It can take a record of a list of activities that are planned. The completed task can be marked as completed. It has a filter feature that enables users to see all the to-do activities, completed activities, and remaining activities. The project is still not completed and the progress is ongoing.

9. My_Portfolio – React.js (Ongoing)

This is my portfolio made by using React.js.

ACHIEVEMENTS

1. 3 Days Python Django Workshop at Vrit Technologies, 31st January
2. Participated in HULT Prize at Khwopa Engineering College, 2023
3. Participated in AWS Fundamentals Workshop by KhEC Knowledge Sharing Circle with AWS cloud club at TU, 16th August 2025
4. Participate in Lumivya Technology's 1-Day AI & Data Bootcamp: ATLAS (Agentic Tools, LLMs, and Scalable Systems), March 29th 2026

ACTIVITIES AND INTERESTS

1. Technical Curiosity
2. Problem-solving mindset
3. Continuous Learning
4. Leadership and Teamwork
5. Extra-Curricular Activities
